## **We are now a Veeam Accredited Service Provider!**

Following a thorough review of our systems, skills, professional services and technical experience working with Veeam, we have become one of only 50 Veeam Accredited Service Providers (VASP) in the whole of the EMEA region.

#### What is Veeam?

Veeam is a software company that has a number of applications for businesses to use to protect the data they store, whether that data is stored on PCs, laptops, servers or in the Cloud.

Veeam's applications backup data and store it securely so that a business can quickly recover from any data loss event such as a natural disaster, cyber incident or human error.

### **What does it mean to be a VASP?**

The VASP program accreditation is issued only to those with the highest Veeam solution expertise levels. All VASP members must meet mandatory requirements on technical expertise and Veeam certifications, as well as have a dedicated professional services staff and a history of successful Veeam implementations.

At Waterstons, our service level is exemplary and we hold several Veeam and VMware certifications including:

- Veeam Certified Engineer (VMCE)
- Veeam Certified Architect (VMCA)
- VMware Certified Professional (VCP)

### **Why did we want to be a VASP?**

VASP is being part of an elite club enabling us to partner with Veeam to deliver increasingly more professional services through them, giving our clients the highest possible level of service and expertise.

We knew we had the expertise needed across architecting, implementing and supporting Veeam backup solutions which has been learned, developed and honed through years of experience, and we're very proud it has paid off.
